### **DETAILED ACTION**

This is the First Office Action in response to the above identified patent application filed on June 27, 2005.

#### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

#### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kanayama (EP 1236914) in view of at least one of Okawa (JP 2002-147459), Yamamoto (JP 10-131969), or Yamada (USP 6,491,436).

Kanayama discloses a sliding bearing including a bearing alloy layer and an overlay layer spread on the surface of the bearing alloy layer and formed by a solid lubricant and a resin; the bearing alloy layer is formed to be a flat surface that undergoes a roughening operation (page 4, lines 45+) to promote adhesion.

Kanayama does not appear to disclose a regular uneven configuration being formed on the surface of the overlay layer, however it was notoriously known in the art to form a pattern of grooves for improving the flow of lubrication of a bearing. For example, the prior art to either Okawa, Yamamoto, or Yamada disclose a bearing having a pattern of grooves. It would have been obvious to one of ordinary skill in the art to modify the bearing of Kanayama with a pattern of grooves, as taught by one of Okawa, Yamamoto, or Yamada, motivation being to improve the lubrication of the bearing.

With respect to claim 2, see Figure 2 of Yamamoto.
